MEC has launched panel sealings for the caps: 1TS/1US/1VS

The seal names are 1TW/1UW/1VW.

The colour is black and they are made of silicone. The 1TW and 1UW sealings provide IP67 and the 1VW provides IP65 sealing from front panel. You can find more information on the website under the area "Panel Sealed and Under Foil Solutions" – 1TW/1UW/1VW.

Another addition to our product range is legends on Varimec caps. Varimec caps are made of nylon as standard. Legends can be printed on the nylon, but the lifetime is less than in case of other materials MEC provides. To overcome this, legends can be printed on Varimec caps made in polycarbonate material. Due to the low temperature range of the material the cap has to be mounted after the soldering process. Varimec caps in polycarbonate with legends are custom products.

There are new datasheets on Foilmec/1YS and 1KS/1KBS/1KCS as well as the datasheet for the sealings: 1TW/1UW/1VW mentioned above, available on the website and on paper from MEC.

Datasheets and additional information can be found on www.mec.dk
