

Compact Size LED Driver: 30 Watt Constant Voltage with PFC

The RACV30 is the first of a new series of constant voltage LED drivers, ideal for powering LED strips and LED modules in applications such as cove lighting, signage, back lighting, channel letters, displays or under cabinet lighting. The input voltage range of 90 to 264VAC assures full functionality worldwide. The new drivers provide up to 30 watts and are available with outputs of 12VDC or 24VDC. The output voltages are closely regulated to compensate for varying loads or supply changes (2% max.).

RACV30 drivers have active PFC and fully comply with EN61000-3-2 Class C certification. With their integrated constant current source they are able to supply several LED chains in parallel. An additional application is the combination with a DC constant current driver, such as Recom's RCD24.

These new constant voltage modules measure only 160 x 55 x 22mm and are smaller than comparable competitor products. A notable Recom element: the drivers feature a terminal block and 5.5mm jack fittings on the input and output for easy and reliable mounting. Their compact design also makes them ideal for applications / installations where space is at a premium

Other Specifications:

- Only high grade materials & components have been used in manufacturing these drivers
- Integrated overload and thermal protection offers additional safety
- 5 year warranty
