

## Multimec gets MIL spec approved

Multimec 5 series has passed the requirements for the MIL-PRF-22885H standard. The standard requires the switch to withstand a gradual load of 25 pounds (115N) for 60 seconds.

In the test a force of min. 30 pounds was applied on a Multimec 5 series switch for about 1.5 min. A built in LED (as specified in the requirements of the standard; the green one on the picture) stayed on during the whole test showing no failures in the contact functionality.

Additional test was performed with double the force designated in the standard. The switch showed no failures in functionality.
