

KH Series

APEM's K range, well-known for its robustness, is now complemented with a new model named KH. Designed for harsh environments, KH series rocker switches are protected against accidental actuation with a protection guard.

Protection guard on 2 or 4 sides

Protection guards prevent accidental actuations which can occur in harsh environments.

K range most robust series

Featuring IP69K front panel sealing as standard, the KH series is the most robust product of the K range. Due to its panel seal, this series is perfectly adapted to the harshest environments (high pressure cleaners, dust, salt spray...).

Customization

The KH series is available illuminated and non-illuminated, with numerous symbols and rocker colours, to meet customer requirements.

The KH series is ideally suited for vehicle cabins and dashboards subjected to harsh environments for the following applications: agriculture, off-road vehicles, material handling & automotive.
